AZURE SECURE LANDING ZONE

Redefining your approach to security

Modality Systems' **Secure Landing Zone (SLZ)** provides customers looking to use Microsoft Azure with a rapidly deployable baseline platform in which to start building their Azure workloads. The SLZ has been scripted and automated around Microsoft's Cloud Adoption Framework to facilitate a swift and secure rollout of the platform in hours - not weeks - dependant on requirements. This allows the customer's Azure workloads to follow in swift succession so they can start realising the value of their cloud investment immediately.

SECURITY BUILT FROM THE GROUND UP

The sophistication and complexity of modern IT security threats mean firewalls and password credentials are no longer sufficient to secure your cloud environment. For robust protection, Modality's SLZs prescribe unique Secure By Design and Zero Trust architecture principles that are built from the ground up to incorporate layers of security to keep the customer's environment optimised and fully protected.

SECURE LANDING ZONES: KEY FEATURES

Protection

Defend assets and services with a multi-layered security approach to reduce exposure to threats.

Separation

Enterprise resource separation across workstreams, users, and roles for greater transparency.

Control

Operational management is baked into the design for complete traceability, visibility, and auditing.

SECURE LANDING ZONES: THE BENEFITS

- Secure subscriptions across the Azure platform
- High levels of governance and resource policy control
- Bespoke vertical compliance (e.g. gov specific compliance built in)
- Critical infrastructure resource security and protection
- Proactive operational management tooling
- Enterprise segregation and role separation
- Built-in management and resource optimisation (including AI), to keep costs under control
- Proactive monitoring enhanced with native Azure SIEM & SOAR tools
- Containerisation of legacy applications with minimal refactoring
- Conforms to vertical industry standards including the National Cyber Security Centre (NCSC) best practices, NHS Digital Data Security Standards, and the UK Gov Minimum Cyber Security Standard
- Azure components deployed to the customer's Azure environment as standard (Sentinel, AAD, Azure Management Groups, Azure Security Centre, Storage Encryption, Express Route, Azure Lighthouse)

WHO IS THE SECURE LANDING ZONE AIMED AT?

The SLZ is suitable out-of-the-box for customers who want effective security and enhanced compliance but do not want complex consultancy and lengthy rollouts. It is also suitable for customers who:

✓ **Are new to Azure or who need a new baseline**

Deployment automation and scripting allows the customer to start utilising Azure in hours rather than weeks.

✓ **Have had a bad experience trying Azure previously**

Alignment to the Microsoft Cloud Adoption Framework ensure the SLZ adheres to best practice throughout the deployment.

✓ **Have specific regulatory concerns**

The SLZ is customisable via scripting during the deployment phase to align with regulatory requirements that ensures compliance of the Azure environment.

ABOUT MODALITY SYSTEMS

As a cloud-first, leading Microsoft Gold partner, Modality has helped thousands of Public and Private Sector organisations globally to achieve Microsoft Modern Workplace and Azure success. Working closely with Microsoft to keep ahead of the latest Azure developments and with deep knowledge of Azure cloud strategy, platform deployment, and ongoing management, Modality ensures our customers keep ahead of the curve to ensure best Azure performance, enable innovation, and future-proof their business.
